### Job description

Siemens Corporate Technology is looking for an experienced ABAP developer/consultant to join the team that develops and maintains i.s.h.med, one of the market's top integrated Hospital Information Systems products based on the SAP platform and IS-H module.

### What are my responsibilities?

- Participate in the core Maintenance process of the product
- Work in direct contact with the Support team
- Analyze issues and provide necessary product optimizations (notes, patches) in close cooperation with the product analysts and testers
- Ongoing development of new requirements (legacy or technical) in specific product modules
- Participate in Quality Management activities in order to ensure defined quality and process standards (e.g. code reviews)

### What do I need to qualify for this job?

- A good knowledge and practical experience with the SAP NetWeaver platform, ABAP and ABAP OO
- Proven experience with ABAP Workbench, Data Dictionary, Databases, Enhancements, Customizing

- Analytical thinking and ability to localize problems (research, code debugging)
- Experience in communication and collaboration with end customers
- Good communication and team player
- Proactive and self-motivated
- Ability to adapt and learn new products and technologies
- Availability for occasional traveling (meetings, trainings)
- German and English written and spoken

## **Benefits**

- Attractive compensation package and work climate
- Meal tickets
- Yearly bonus system
- Private health and life insurance
- Private pension
- Flexible schedule and work from home policy
- Personal and professional development
